4Media iPod Video Converter is an application that you can use to encode media files to formats supported by iPod devices, including MP4, MP3 and MOV. The interface of the tool is clean and intuitive. Media files can be imported into the queue by using either the file browser, treeview or "drag and drop" method. Batch processing is supported. In the list you can check out the name, duration, output profile and size, along with status of each file. After you select the output profile and destination, you can proceed with the encoding task. But you can also change audio and video properties when it comes to the quality, size, aspect ratio, frame rate, sample frequency rate, bit rate, channel mode, volume and others. In addition, you can split videos by time or size, preview clips in a built-in media player and capture frames, create new output profiles, view file information, load an audio CD, check out a log window, set post-task actions (e.g. exit program, turn off computer), enable 4Media iPod Video Converter to run in the background in normal priority, use a bit rate calculator, customize the CPU core number in processing, and more. The media conversion tool requires a pretty high amount of system resources, has a good response time, supports several skins and languages, quickly finishes a task and preserves a good image and sound quality in the output tracks. You can also check out a brief help file for novices. We highly recommend 4Media iPod Video Converter to all users. Audio Editor: 2 Video Editor: 4 All-In-One: 4 System Requirements: Win7/Win8/Win8.1 4Media iPod Video Converter Screenshots: Audio: You can add audio files to the Queue from any where, the program uses Folder Explorer(Windows Explorer).
