Lepide Active Directory Self Service Crack Torrent 2022

Lepide Active Directory Self Service Crack+ Serial Key

Lepide Active Directory Self Service is a solution for Active Directory users. The purpose of the solution is to provide the means for regular users to reset their password and other security-related features, such as account lockouts and account expirations. The solution is based on a built-in Active Directory Group Policy component that enables its features. This component is known as GINA/CP. The solution is available in both 32-bit and 64-bit versions. It supports both Windows Server 2008 and Windows Server 2008 R2, as well as the clients of these operating systems. Lepide Active Directory Self Service is a web-based solution that utilizes the Internet Information Services (IIS) web server to provide the administration interface. This allows the solution to access and function on Windows operating systems. The solution requires the use of the Active Directory Domain Services (AD DS) Schema to store the user accounts. This means that the solution is compatible only with Windows 2000, Windows XP, Windows Server 2003, Windows Server 2008 and Windows Server 2008 R2. The Lepide Active Directory Self Service supports Windows Integrated Authentication. This feature makes it possible for users to enter their credentials when logging in to the web interface. This solution does not support Kerberos authentication. When the Lepide Active Directory Self Service is installed, the GINA/CP component is enabled. The purpose of the GINA/CP component is to allow regular users to perform administrative tasks such as accessing the Active Directory Schema, modifying a user account or executing other operations. The Lepide Active Directory Self Service is compatible with Windows Server 2003, Windows Server 2008 and Windows Server 2008 R2. For these operating systems, the Lepide Active Directory Self Service is delivered as an IIS website that supports HTTPS. It requires a web server to function properly. When a user is logged in, the Lepide Active Directory Self Service presents a series of screens where administrative tasks can be performed. The user may see a list of the Active Directory users and domains on their computer or the Active Directory users on the network. It is possible to delete an Active Directory user, lock the account or lock the entire user group. In addition, it is possible to limit the type of actions that regular users can perform or specify that only certain fields can be updated. It is possible to create a schedule for allowing or preventing the creation of new user accounts or the modification of existing user accounts. The Lepide Active Directory Self Service is available in English

Lepide Active Directory Self Service Crack

Enable this function if you want users to send authentication requests to AD. Also, users will be unable to reset their password if this function is disabled. Create a new user in Active Directory: Allows the user to create a new user in the LDAP directory. Deactivate user in Active Directory: Allows the user to deactivate a user in the LDAP directory. Get user password: Allows the user to get the password for a user account. Reset password: Allows the user to reset a user's password. Authorize co-worker: Allows the user to authorize other people in the LDAP directory. Unlock locked accounts in Active Directory: Allows the user to unlock accounts that have been locked. RESTART OBJECTS OBJECT NAME DESCRIPTION 1.0.1.1.1.1.1.1 Enable This Function To Enable Users To Send Authentication Requests To Active Directory. Also, Users Will Be Unable To Reset Their Password If This Function Is Disabled. 81e310abbf

Lepide Active Directory Self Service Torrent

Lepide Active Directory Self Service is a web-based application that enables Active Directory users to perform a set of tasks using GINA/CP without needing administrative privileges. The application allows IT teams to create schedules so that users can be locked down when needed. Password resets can be initiated in the same manner as account lockouts or as a one-time password can be issued. Users' password expiration date and other attributes are also verified, which can save the company significant costs when account-holders forget their passwords. The application is suitable for: Regular Active Directory users. IT staff that need to perform certain actions with regular Active Directory users. Customers who manage several Active Directory environments from one central location. Customers who need to unlock accounts locked by another security application. Lepide Active Directory Self Service is an implementation of the ACS (Application for Computer System) and GINA/CP (Guide for Information and Knowledge Architecture for Windows 2000 Server). Lepide Active Directory Self Service is compatible with and supports the following Active Directory environments: Active Directory (AD) Server 2000 and 2000 SP3 Active Directory (AD) Server 2003 and 2003 SP2 Lepide Active Directory Self Service is developed on Microsoft.NET Framework 2.0 and requires Microsoft SQL Server 2000 or later. This software has been tested and is validated in accordance with the guidelines and requirements on the ISTE website. However, this software is not intended for use in life-threatening or time-critical applications, see the related products on the ISTE website for more details. What's New In Lepide Active Directory Self Service?

Lepide Active Directory Self Service provides the capability to grant special privileges to regular Active Directory users so that they can perform a series of simple tasks without relying on system administrators. It integrates with GINA/CP, making it possible that users can reset their passwords even if their accounts are locked. Doing so can be accomplished by pressing the Ctrl + Alt + Delete key combination and answering a series of questions or using a one-time password (OTP). A web-based dashboard is provided so that events such as password resets, account lockouts or overall activity can be logged and observed. This way, administrators can identify potential issues or abuses and act on them. It features a component that alerts users if their passwords are about to expire. Administrators can decide what actions can regular users perform so that only specified fields can be updated or modified. Users can have no access, full control or only read-only access to Active Directory Attributes. When SSL security is active, Lepide Active Directory Self Service redirects traffic from HTTP to HTTPS. Administrators can unlock all the locked accounts simultaneously at a certain point or they can create a schedule. It is possible that regular users can grant permissions to other coworkers by using the "Authorize co-worker" function.
